COLLECTION OF
Choicest Lilacs

Bobbink & Atkins

Nurserymen and Florists

RUTHERFORD : NEW JERSEY

Great Lilac Collection

FEW realize, who know only the common doorway "laylock," that it is not a native American shrub, and that there are other varieties of great diversity in size, color, form, and fragrance of blooms, easily obtainable and easy to grow.

Certain French hybridizers have done wonders with this favorite flower, and it is entirely possible now to have a whole garden of Lilacs, early and late, tall and dwarf, in bushes or in trees, with great variation in fragrance, and in color from pure white to the deepest reds, blues, and purples, with all the intermediate shades of blue and pink, of lilac and lavender.

These superb flowers vary also in "doubleness" from those like a small rose to great single blooms, and the panicles in which they are borne are often a foot in length.

When the Lilac gardens at the Arnold Arboretum in Cambridge, and at Highland Park at Rochester are in bloom, they are visited by tens of thousands of people. No hardy shrub is more useful in park and large garden planting, while the home grounds without a few distinct sorts are deprived of a most desirable resource.

The descriptions given are simple and accurate, and all the sorts listed are desirable. Our stock is a notable one, and has taken years to obtain, select and propagate. We believe no other commercial collection in America approaches ours in completeness and quality.

Alba Grandiflora. *Single.* White; large trusses.

Albatre. *Double.* Pure white flowers.
